Appendix

Appendix 1: Development Plan Tracker, Planning Applications, Land Use Policies & Flooding Information	11
Appendix 2: Scope of Planning Applications	16
Appendix 3: Datasets	19
Appendix 4: The National Grid	21

1. Introduction

- 1.1. Landmark Information Group is the leading supplier of planning, environmental, land-use and mapping information in Great Britain. Having established a reputation for producing accurate, comprehensive, timely and user-friendly reports, Landmark's clients include virtually all the largest firms of civil engineers, environmental consultants, surveyors, developers, house builders, lawyers, insurers and banks.
- 1.2. This guide has been prepared by Landmark Information Group Limited to inform and provide guidance to users on how to effectively use Plansearch Commercial and explain the scope and benefits of the report.
- 1.3. This guide will be regularly updated to reflect any changes to the product and to the legal or practical framework, where relevant. A copy of this guide is available free of charge at www.landmarkinfo.co.uk.

2. What is Plansearch Commercial?

- 2.1. Plansearch Commercial is a planning report specifically tailored to property professionals including lawyers, conveyancers, developers, house builders, surveyors, investors, valuers, managers, owners and buyers.
- 2.2. Investing and collating the planning history of a site and the surrounding area, and searching for the relevant sections within the Development Plan (once the most up to date plan has been found) can be a very lengthy process. Plansearch Commercial can help by providing all the information required in one easy to use, illustrated report. It contains information on the following:

Development Plan Tracker – a listing of relevant development plans

Large Planning Applications, made since 1997, with an estimated development cost of over £100,000, within 500m of the site boundary

Small Planning Applications, made since 1998, with an estimated development cost of under £100,000, within 250m of the site boundary

Land Use Policies derived from the development plan, within 500m

Flooding information within 500m of the site boundary

- 2.3. Plansearch Commercial is designed and priced to be part of every commercial property/site screening process, and should be obtained at the beginning of every commercial evaluation or transaction.

3. The Planning Process

- 3.1. The need for Plansearch Commercial arises from the fact that the planning process is very complex. The report includes planning information of two types: one derived from local authority development plans and the other from individual planning applications and decisions.

- 3.2.** Development plans are the statutory documents prepared by local planning authorities that set out the policies and proposals for future development and use of land, they also incorporate the planning policies of central government. There are different types of local authority, but they all have a role in preparing the development plan for their area, whether they are, for example a District Council, County Council, Unitary Authority or National Park Authority. Plans are substantial and very detailed and subject to review and amendment. A plan goes through different stages before it is finally agreed and in place ('adopted'), it may be a proposed alteration or replacement which has been proposed formally (often called a 'deposit' plan). The cycle from one 'adopted' plan to another can vary but is generally around five years.
- 3.3.** The development plan has important practical consequences. It provides the framework for consulting the public and other bodies on proposed land uses and development, and, once a plan has been formally adopted, it is the required starting point for making individual planning decisions. Development plans include general statements of policy, but they must also include detailed policies which often relate to specific pieces of land. For example, they might indicate areas suitable for housing, retail, industrial, commercial, or conservation uses. They therefore give an early indication of likely future uses of land and are a crucial starting point in determining the planning context of any piece of land.
- 3.4.** The second type of planning information included in the Plansearch report comprises individual planning applications made in the context of the development plan. Applications for planning permission are submitted to the relevant local planning authority and their details are added to the planning register and maintained by that authority for public inspection. Applications generally must also be notified to local residents immediately adjoining the site, or advertised through a notice on the proposed development site itself.
- 3.5.** A planning officer for the authority will consider the application, taking into account a wide range of factors. These will include the planning history of the property and relevant adjoining sites, comments from local residents, and policies included or proposed in the development plan. A visit to the site may also be made before a report is prepared and a recommendation is submitted to the relevant committee of the planning authority, which will usually make the decision. In most cases a decision should be reached within 8 weeks of the application being made. Unless acted upon, a planning permission usually lapses after 5 years. Once a decision is made it too will be added to the planning register.

4. How do I get a Plansearch Commercial?

- 4.1.** The quickest and easiest way to order a Plansearch Commercial report is via our website, www.landmarkinfo.co.uk. Ordering via the web enables the user to accurately locate the site on current large-scale Ordnance Survey mapping and order a report for the exact site required. The report can then be delivered by email as a .PDF or as a paper report. Call our Customer Services team on 01392 441728 to set up your individual user name and password.

- 4.2. To order a report by traditional methods please contact Customer Services using the details below:

Landmark Information Group Limited
Imperial House
21 – 25 North Street
Bromley
BR1 1SS

Telephone: 0870 606 1700
Fax: 0870 606 1701
DX: 148420 Bromley 14
E-mail: helpdesk@landmarkinfo.co.uk
Internet: www.landmarkinfo.co.uk

- 4.3. If ordering a Plansearch by the traditional method it is recommended and requested that a location plan clearly showing the site boundary in relation to established surface features is supplied. If the site is a new development the developer's plan and Land Registry plan should be submitted to aid us in site identification. If in doubt please call for clarification, as orders submitted without a location plan may be delayed.
- 4.4. Orders and plans should be sent by post, fax or by DX to the address above.
- 4.5. Reports may be received electronically in .PDF format within 24 hours, or in 2 working days if a paper report is required.
- 4.6. The fees charged in respect of the searches are reviewed from time to time. The current fees and methods of payment can be ascertained by contacting Landmark Customer Services.

5. What does my Plansearch Commercial tell me?

5.1. General Information

5.1.1. The report includes information from a number of sources. The Development Plan Tracker information is derived from the Development Plan Monitoring Database supplied by Dev Plan UK.

5.1.2. The planning application information has been supplied to Landmark Information Group Limited by ABI Building Data Limited.

ABI has over 60 years experience in gathering, processing and publishing detailed information on property and construction developments. ABI Building Data Limited is part of Bertelsmann Group – one of the largest media groups in the world and the leading supplier of construction information across Europe.

5.1.3. The information derived from the development plans has been obtained from the local planning authorities. For ease of use, this information has been standardised into 10 categories for the whole of Great Britain, making it easier to compare information on Land Use Policies from different local authorities (for further information see section 5.6.3).

5.1.4. The flooding information used in Plansearch is obtained from the Environment Agency for England and Wales and from the Centre for Ecology and Hydrology for Scotland.

Local authorities also hold information on flooding. This is sometimes included in the development plan.

- 5.1.5.** The Plansearch report is based on the datasets listed in Appendix 3 to this Guide. The Users attention is drawn to the update cycles for this information. Landmark's Terms and Conditions apply to the use of the Plansearch report.
- 5.1.6.** Landmark Information Group is constantly working with data providers to improve the data sets and so the information available to Landmark may change from time to time.
- 5.1.7.** Users should not re-use old reports as subsequent planning decisions and processes can rapidly supersede the data. The report is valid at the time it is delivered to the Users and is supplied subject to Landmark's Terms and Conditions.
- 5.2. High Quality Location Maps**
- 5.2.1.** Two location maps are provided in the report, both are derived from Ordnance Survey data. The main map confirms the boundary of the subject site, which is marked in magenta. Users should check the boundary is correct on receipt of their Plansearch report and call our Customer Services team on 01392 441728 if there is an issue with the boundary.
- 5.2.2.** Since all sites differ in shape and area the maps are not reproduced at a set scale. The minimum distance from the site boundary to the map frame boundary is 50m.
- 5.2.3.** The second map, which is at a smaller scale, shows the location of the property in relation to local features, such as streets and schools and the Plansearch search zone buffers (marked in blue) positioned at 250m and 500m from the site boundary.
- 5.2.4.** Adjacent to the above map you will find the site location description and a 6 figure National Grid Reference, relating to the centre of the site, although mapped accurately this rounded to the nearest 10m. To convert this National Grid Reference to an alphanumeric string, please refer to page 18.
- 5.3. Summary**
- 5.3.1.** The Summary is split into two sections, the first one outlines the following details for the site:
- Property address details**
 - 'Large' Planning Applications**
 - 'Small' Planning Applications**
 - Land Use Policies applicable**
 - Flooding**
 - Local Authority Areas**
- 5.3.2.** The second section in the Summary outlines the following details for the search area:
- Number and classification of 'Large' Planning applications within 500m of the site boundary**
 - Number and classification of 'Small' Planning applications within 250m of the site boundary**
 - Number and classification of Land Use Policies within 500m of the site boundary**

5.4. Development Plan Tracker

- 5.4.1.** This information is derived from the Development Plan Monitoring Database supplied by Dev Plan UK. This database contains information regarding the lifecycle of current and emerging plans throughout Great Britain. A development plan is a planning policy document that provides planning guidance and may be published by Local Authorities, County Councils and Park Authorities. There are a variety of different types of plans including: Local, Unitary, National Park, Structure, Mineral, Waste, Mineral & Waste and Regional Park.
- 5.4.2.** The information provided details the development plan title, type, status, stage(s) completed with dates (or periods) and any relevant comments. The process of adopting a plan is dynamic and at times lengthy. For those plans that are currently being prepared, the relevant stage(s) in each plans preparation are recorded.
- 5.4.3.** The list of development plans is based on boundary information available to Landmark at this time. As a result of this some plans relating to neighbouring authorities may be shown.

5.5. 'Large' and 'Small' Planning Applications

- 5.5.1.** Plansearch contains information of applications made for planning permission which have been supplied by local authorities. The report has been divided into two separate sections for ease of use – 'Large' Planning Applications and 'Small' Planning Applications.
- 5.5.2.** **'Large' Planning Applications section** – applications made since 1997, with an estimated development cost of over £100,000 – the search radius is 500m from the site boundary.
- 5.5.3.** **'Small' Planning Applications section** – applications made since 1998, with an estimated development cost of under £100,000 – the search radius is 250m from the site boundary.
- 5.5.4.** For ease of use, planning applications have been classified in the following way:
- Housing developments or alterations
 - Civil engineering construction or maintenance projects (e.g. bridges, runways etc.)
 - Transportation facilities (e.g. petrol stations, car parks, airports, etc.)
 - Sports/ Leisure developments or alterations
 - Education/ Health developments or alterations
 - Commercial/ Retail developments or alterations
 - Power/ Water/ Telecom developments or alterations
 - Hotel/ Catering developments or alterations
 - Industrial/ Agricultural developments or alterations and all demolitions
 - Public Building developments or alterations
- 5.5.5.** For each application the direction and distance from the subject property/site is provided, together with the classification, title, location, development type, category, stage, application reference and date, project size, floor space, number of units, area and positional accuracy.

- 5.5.6.** The background mapping used to display the Planning Applications is Ordnance Survey Internet Street Mapping. All planning applications featured in the report are plotted as a symbol on the map (a Legend is provided) and have a Map ID with corresponding text provided in the main body of the report.

5.6. Land Use Policies

- 5.6.1.** Plansearch provides a summary of policies for future development and land use within the area. A description of the source from which the information was derived (including plan title, status, and date published) is provided. Please note for the purposes of this report information is derived from the latest adopted or deposit version of the statutory local plan.

- 5.6.2.** The search radius for land use policies is 500m from the site boundary.

- 5.6.3.** To ensure consistency and ease of use, the information derived from the development plans has been standardised across Great Britain to the following:

Housing - residential and other housing developments, including re-development and conversion.

Transport - transportation including planned corridors for new roads, minor and major road and rail alterations and a diverse range of cycle, pedestrian and parking policies.

Open Land - includes green belts, nature conservation areas, Sites of Special Scientific Interest (SSSI), etc. Constraints normally relate to the preservation of such areas and restrictions on residential or any other development.

Heritage Environment - areas of many towns are designated as conservation areas under statutory powers. Additional statutory hurdles will be in place, and policy constraints are also often imposed concerning the types of construction that will be allowed.

Town Centre and Retailing – includes retail areas, retail servicing areas and town centres.

Industrial and Commercial - includes commercial development sites, offices, warehousing, hotels and business and industrial use in general.

Community and Social Facility – includes health, education, sport, leisure and social areas and allotments.

Waste, Pollution, Minerals, Water and Energy - includes waste processing and disposal sites, land use for utility purposes (such as sewerage) and potential development hazard areas.

Rural/ Settlement - villages and other rural areas, urban areas.

Other Site-Specific - areas and sites not covered by the previous classifications. Includes mixed use and special policy areas and sites.

It should be noted that these classifications may change over time.

5.6.4. For each classification the direction and distance from the subject property is provided together with a brief description, the chapter, policy* and plan reference.

* At the end of the Land Use Policy Section a table of the policies relevant to the search area and their corresponding policy headings is provided.

5.6.5. The background mapping used to display the Land Use Policies is the latest Ordnance Survey Internet Street Mapping. The symbols/lines/polygons are plotted on the map (a Legend is provided), although please note where two or more lines need to be shown in exactly the same position only the most important line will be shown, and the order of importance is as follows:

Transport

Housing

Industrial and Commercial

Waste, Pollution, Minerals, Water and Energy

Town Centre and Retailing

Community and Social Facility

Heritage Environment

Open Land

Other Site-Specific

Rural/ Settlement

5.7. Flooding

5.7.1. For England, the flooding assessment has been provided by the Environment Agency (EA). Plansearch is able to identify whether the EA has identified the property/site and/or the surrounding area as at risk from flooding.

Data is also provided for Wales but does not have the same risk definitions and further enquires should be made with the relevant local authority who each hold separate planning data.

Please see Annex 3 of this guide for a full explanation of the data.

5.7.2. For Scotland the flooding information is provided by the Centre for Ecology and Hydrology (CEH). Plansearch is able to identify whether the subject property or the surrounding area is at risk from flooding from non-tidal rivers.

5.7.3 Flood risks at any specific location may be influenced by local factors which are not included in the report. These include:

Flooding from minor rivers and streams

Any flood defences that may be in place

5.7.4 An outline of the potential flood area will be illustrated on the flooding map.

5.8. Useful Contacts

5.8.1. Having read the details identified in the report please contact the relevant organisation listed in the Useful Contacts section, quoting the details supplied in this report if further information is required.

5.9. Useful Information

5.9.1. The Useful Information section at the back of the report is a summary of this User Guide and is intended to help those analysing the report understand its contents.

6. How do I proceed now?

6.1. Plansearch constitutes what is known as a 'desk study', which is an information-gathering exercise and is designed to help the Users decision making process relating to possible next steps.

6.2. If the results are clear or there are no perceived problems the User may proceed safe in the knowledge that quality information has been obtained.

6.3. Searches showing planning information of concern - in some cases the search will reveal entries that may be of some concern. If further information is to be sought the User should use the Useful Contacts section to determine who the contact is and contact the relevant organisation quoting the planning application reference or plan name, policy and chapter.

Appendix 1 – Development Plan Tracker, Planning Applications, Land Use Policies and Flooding Information

1. Development Plan Tracker

- 1.1 This section of the report provides details of the current and emerging development plans. The information supplied includes title, type, status, stage(s) completed with dates (or periods) and any relevant comments. For those plans that are currently being prepared, the relevant stages and dates/periods in each plans preparation are recorded, which may include:

Approval or adopted date

Issue Papers period*

First Deposit period*

Second Deposit period*

Pre Inquiry period*

Public Inquiry period*

Inspectors Report date

Post inquiry period*

Operative date

Legal Objection End date

* Note: Where possible the start and end date of the period will be supplied, however on some occasions only one date is supplied and therefore only this will be shown in the report.

2. Planning Applications

- 2.1. The following is an explanation of the descriptions used in the report:

Title: a brief description of the planning application

Location: based on details provided by the local authority (see Positional Accuracy below).

Development type: states the kind of application that has been made. Categories include; new builds, conversions, refurbishments, repairs, and demolitions. If a 'new build' is reported it is possible the development has not been built yet and not shown on the accompanying map, however if it is shown the address and map reference is likely to be approximate. If any other category is shown it is likely that the area being developed will already be shown on the map, in part or completely.

Category: describes the type of development applied for, and includes categories such as offices, commercial and retail, and several types of residential development.

Stage: there are 15 stages in total which tell you at what stage an application for planning permission is, for example detail planning, detail approval etc. – see 'Project Size' for more detail.

Application ref: is the reference given to the application for planning permission by the local planning authority to which the application has been made. If you wish to enquire about a particular application, contact the relevant local planning authority quoting this reference.

Date: the date that the application was formally submitted to the local authority by the client or agent, which would only change if an 'Outline' application is then approved and a 'Detail' application takes its place. Plansearch reports on applications since 1997 for 'large' projects and since 1998 for 'small' projects.

Project size: highlights whether the development is small or large according to an estimated development cost of under £100,000 (small) and over £100,000 (large). (Note: Large developments are usually tracked throughout their lifecycle until a final decision is made— see Appendix 2 for more details).

Floor space: measured in square metres, provides a measurement of the proposed floor space of a development (i.e. of every level of a development)

No. of Units: relates to the number of units proposed for the development.

Area: measured in square metres, provides a measurement of the total area of the development.

Positional accuracy: indicates the likely accuracy with which an application has been found on the map. Planning applications are given a geographical position on the map according to the address given in the planning application itself. Circumstances will exist where the address supplied is incomplete and an approximate position has been inferred from the incomplete details. The positional accuracy statement will show this – for example 'Manually positioned within the geographical locality'.

2.2. Road, Rail, Utility and Large Development Planning Applications

Road, rail, utility and large development applications often do not have definite addresses but are identified with general descriptions. As a result, this report may show such applications by reference to a single point rather than the whole length/area of the project. In many cases the projects will be about changes to existing infrastructure (e.g. road resurfacing and existing buildings), and therefore may be identified by using the map. However, in cases of 'new build', identifying the length/area of the project is more difficult, although for large developments the floor space, no. of units and area can be used to estimate the size of a development.

In all circumstances there is the possibility that the single point reference will not be found within the search area. For this reason, for road, rail utility and large development applications, the Land Use Policies section (section 2 of the report) should be referred to. We suggest that you then contact the relevant local planning authority for further information.

2.3. Minor developments

This report does not include information on applications for planning permission for developments of a very minor nature, such as conservatories, porches, signs and car ports (see Appendix 2 for further examples).

2.4. Permitted Developments

Some developments do not require an express grant of planning permission, perhaps because its impact on an area would be small, or because it would involve a land use which is very similar to an existing use. This sort of development often takes place under what are known as 'permitted development rights', and it is therefore often referred to as 'Permitted Development'. Examples of permitted development rights include, changes to the inside of buildings, or small exterior alterations that do not significantly alter the volume or area of a building.

In some areas of the country permitted development rights are more restricted. This may be because land is within an area designated as a National Park or Conservation Area, or it may be because a local authority has formally decided to revoke or modify permitted development rights under what is described as 'article 4 direction'.

3. Land Use Policies

3.1 Local Plans, from which the Land Use Policy information has been derived, are produced by local planning authorities and go through an elaborate consultative exercise before they may be formally adopted as policy. This process includes the preparation and publication of deposit drafts, modifications proposed or made as a result of a planning inspector's report and the final adopted plan itself, which is the authoritative source of the policy. Please note for the purposes of this report information is derived from the latest adopted or deposit draft version of the statutory development plan. Users of this report are advised to consult with the authorities in the Useful Contacts section to determine the status of the relevant development plan.

3.2. Policies

Where policy numbers have been identified these relate only to the distinct geographical areas shown on the Information Map. Users should also be aware that all local planning authorities have general policies, which apply either throughout the authority's area and/or apply generally to particular land use descriptions. These general policies have not been included in the report.

3.3. Sources

The Land Use Policy information that has been used for this report has been derived from the latest adopted or deposit version of the statutory development plan. In some areas there are two 'levels' of plan, either structure plans (or Part I of a unitary development plan), which are strategic and general, and local plans (or Part II of a unitary development plan) which are specific and particular. Structure plans have not been used as a source as the policy information contained should have been taken into account by other local planning authorities in the production of their specific plans.

3.4. Land Use Policy Classifications

Local planning authorities outline the relevant policies to be applied to the area. These policies are usually either applied to specific geographical areas or to the whole of the local authority area. The geographically specific policies are mapped and reported in a textual format in Plansearch, whereas the general policy information is not included.

Land use policy classifications differ between local planning authorities. There are also significant differences in the way policies are expressed. For the purposes of the report, a standardisation process has been undertaken in order to produce a nation-wide classification system which has ten categories in total (see 5.6.3 above). Each category will have associated policies, which determine the circumstances in which development may be permitted - information about these can be obtained from the relevant planning authority. The following is an overview of the classifications used in the report.

Housing - Residential and other housing developments. Areas designated for re-use, conversion, improvement or neighbourhood renewal. This includes re-developments, gypsy and traveller sites.

Transport - Ranging from airports to footpaths and cycle routes, transport includes planned corridors for new roads, minor and major road and rail alterations and parking policies. Park-and-ride and other public transport facilities are also covered.

Open Land - Open land includes green belt, nature conservation areas, Sites of Special Scientific Interest (SSSI), coastline, country parks, and Areas of Outstanding Natural Beauty. Constraints imposed by policy normally relate to the preservation of such areas and restrictions on residential or other development.

Heritage Environment – Many areas of many towns are designated as Conservation Areas under special statutory powers, such areas are included within this classification along with Areas of Special Character, Scheduled Ancient Monuments, archaeological sites and areas of historic value (landscape and built environment). In these areas, constraints are often imposed concerning the types of construction that will be allowed.

Town Centre and Retailing - Town centres, district and local retailing areas, as well as large sites such as out of town shopping centres. Includes retail servicing areas.

Industrial and Commercial - Includes commercial development sites/opportunities, offices, distribution and warehousing, business and industry. Arts, culture, entertainment and hotels are also covered.

Community and Social Facility - Health and education facilities; sport, leisure, social and community centres, including police and local government buildings/areas and allotments.

Waste, Pollution, Minerals, Water and Energy - Includes waste processing and land used for the purposes of utilities (e.g. sewerage) and potential development hazard areas such as unstable land and areas susceptible to coastal erosion. Other examples of sites included within this category are: quarries, mines, waste, landfill sites and power stations.

Rural/ Settlement - Village outlines and other rural areas, urban and suburban boundaries.

Other Site-Specific - Areas and sites not covered by the previous classifications. Includes 'problem buildings', mixed use and special policy areas and sites.

It should be noted that these classifications may change over time.

4. Flooding

4.1 England and Wales

The information given on flooding in England and Wales is based on an assessment by the Environment Agency (EA).

Plansearch Commercial contains a map which indicates areas which:

- (i) could be affected by flooding, either from rivers or the sea, if there were no flood defences. These areas could be flooded:
 - from the sea by a flood that has a 0.5% (1 in 200) or greater chance of happening each year
 - or from a river by a flood that has a 1% (1 in 100) or greater chance of happening each year.
- (ii) outlying areas that are likely to be affected by a major flood, with up to a 0.1% (1 in 1000) chance of occurring each year
- (iii) the existence of flood defences
- (iv) areas benefiting from flood defences

and certain other information.

In all cases, the information is qualified by time and other limitations. It is important to read Annex 3 of this Guide to fully understand the flooding information and exactly what it will and will not tell you.

4.2 Scotland

For Scotland flooding information has been provided by the Centre for Ecology and Hydrology. The flooding data have been generated by a generalised technique applied to specific catchments above the tidal limits. However, it is recommended that further enquiries are made of the Scottish Environment Protection Agency or the Local Authority in relation to any local flooding history and the existence of any flood defences.

Appendix 2 : Scope of Planning Applications

The following list details application types that are not captured for all developments:

Amendments, Variations, Revisions:

Amendments to an application

Conditions:

e.g. A supermarket can build a store, but they cannot open after 10pm.

Relaxation of Conditions:

e.g. The supermarket can now open after 10pm.

Continued Use, Retention :

Approval was for a fixed term and the applicant wants to renew or extend this approval.

County Matters:

Most applications are handled at district level; these are considered and decided at county level.

Duplicates:

Where it appears an applicant and an authority is unlikely to reach a decision, duplicate application are made to allow the applicant to institute appeal proceedings, whilst still negotiating the previous application.

Determinations:

To determine if planning approval is required.

Consultations, Formal Observations:

The main decision is made by another local authority.

Retrospective Applications:

A construction/building that has been erected without planning permission (or land used for purposes without permission) and the applicant now wishes to legitimise the building (or use of land) on the pretext that it has been there (or in use) for a considerable time and is therefore assumed to be legitimate.

Temporary:

Application is for a set period of time. Once this has elapsed, either an extension will be applied for or on site activities will have to cease.

Substitute House Type:

Developers build particular house models. These are when they get permission to build a "Regent" on site and instead want a "Monarch".

Certificate of Lawfulness:

To ascertain if a proposed use of buildings of land, or any proposed operations would be lawful.

Circular 18/84:

Development by a government department or the Duchy of Cornwall.

Prior Approval, Notification (except Telecommunications):

The local authority has already determined that they will allow this type of development in this area, but wish to be kept informed.

Listed Building (if full planning on list):

A planning application and application of listed building consent should be lodged together, if needed. We just cover the planning application in this case.

The following, although not exhaustive, lists the minor developments that are not captured. However, please note that some of the developments listed below may have been captured if they formed part of a larger development.

Car Ports**Conservatories****Domestic Access****Domestic Demolition (unless whole house)****Domestic Roofing****Dormer Extensions****Dutch Barns****Electricity Sub-Stations****Exploratory Boreholes****Flagpoles****Garden Curtilages or Garden Extensions****Garden sheds****Garden Walls or Railings****Greenhouses****Horse Boxes****Landfill sites****Loft Extensions****Mobile Homes (including mobile home parks)****Overhead Lines****Pigeon Lofts****Porches****Portal Framed Buildings****Prefab Buildings****Residential Lighting****Septic Tanks****Signs, Advertisements****Single Storey Extensions****Steel Buildings****Tables/Chairs on Highway (Pavement café)****Timber Buildings****Tree Works, Pruning****Utilities (gas, water, electricity)**

(Note: Planning applications not revealed in the report include developments made by public bodies or development corporations and developments that may have taken place where planning permission was never required or sought. Building Regulations and Tree Preservation Orders are also not covered by this report.)

Tracking of Planning Applications

'Large' applications with an estimated development cost of over £100,000

Post 2000 all large planning applications have been tracked to ascertain whether a final decision has been reached, unless the scheme was found to be abandoned.

Prior to 2000 large planning applications were tracked except for those which fall under the following criteria:

- Developer to build contracts (where the client is doing their own work)

- Site to be sold projects

- Projects where there were no plans to develop the site in the near future

- Outline planning

- Projects with an estimated building cost of under £500k

'Small' applications with an estimated development cost of under £100,000

Only the main application from the local authority is processed, amendments to applications aren't made, although sometimes a completely new application is submitted to a Local Authority for a different stage and therefore this will be included.

Appendix 3 - Data Sets Currently Used in Plansearch Commercial

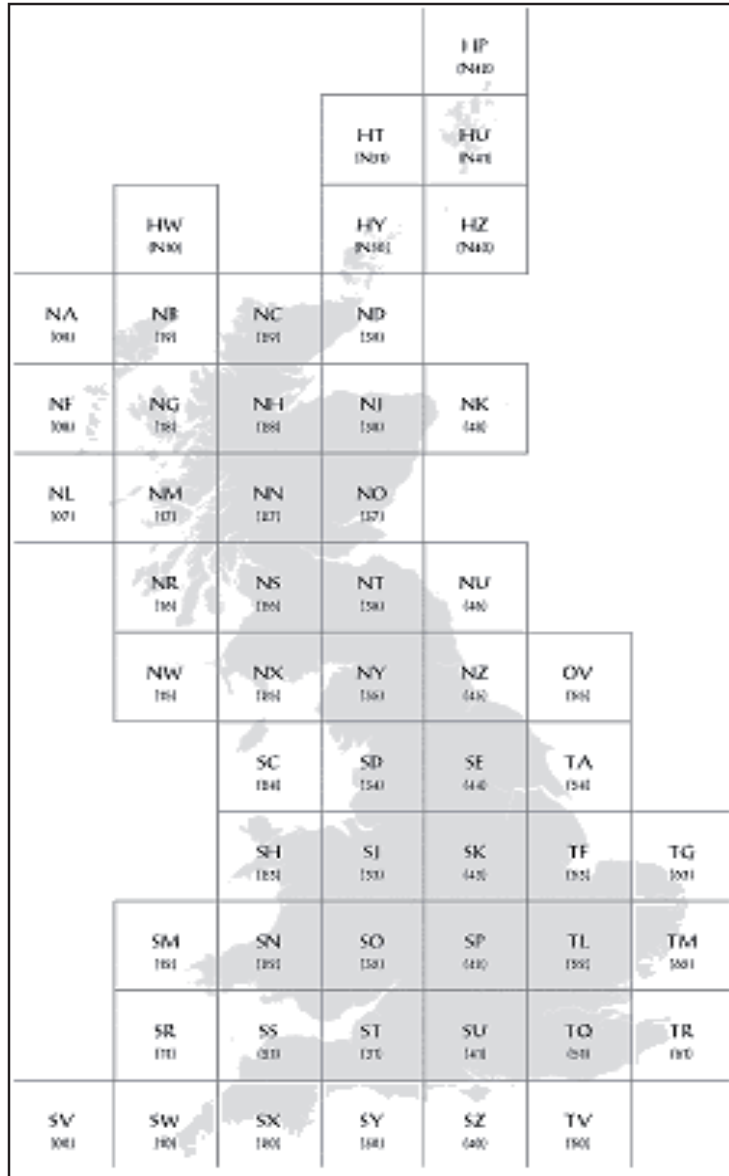

Title	Remarks	Source	Data Type	Data Range	Update Cycle	Section
Areas Benefiting from Flood Defences	This dataset shows those areas benefiting from demarcated flood defences whereby in a 1% fluvial or 0.5% tidal flood event, areas that would otherwise flood are protected provided that the defences do not breach.	Environment Agency	Polygon & Text	From 2005	Quarterly	Flooding
Development Plan Tracker	This information is derived from the Development Plan Monitoring Database supplied by Dev Plan UK. This database contains information regarding the lifecycle of current and emerging plans through-out Great Britain. A development plan is a planning policy document that provides planning guidance and may be published by Local Authorities, County Councils and Park Authorities. There are a variety of different types of plans including: Local, Unitary, National Park, Structure, Mineral, Waste, Mineral & Waste and Regional Park Plans. The information provided details the development plan title, type, status, stage(s) completed with dates and any relevant comments. The process of adopting a plan is dynamic, and at times lengthy. For those plans that are currently being prepared, the relevant stages in each plans preparation are recorded.	Dev Plan UK	Text	Variable	Monthly	Development Plan Tracker
Flooding data (Scotland)	This raster data comprises 50m cells covering mainland UK and was generated using a generalised technique. The display of this flood hazard therefore is indicative only. It is divided into levels based on the frequency and magnitude of a predicted 100 year term.	Centre for Ecology and Hydrology	Raster Cells	n/a	Variable	Flooding
Extreme Flooding from Rivers or Sea without Defences (Zone 2)	Flood Zones are defined by the Government's Planning Policy Guidance 25 on 'Development and flood Risk' for England (PPG25) dated July 2001. The Flood Zones illustrate the probability of flooding across England for planning consultation. The Flood Zones have been identified using the best available data held by the Environment Agency ignoring the presence of flood defences (as required by PPG25, reference table 1 note (a)). This dataset is Flood Zone 2, the Environment Agency's best estimate of the areas of land, ignoring the presence of defences with an annual probability of flooding of 0.1 % (1 in 1000) or greater from rivers and the sea, but with an annual probability of flooding of less than 1 % from rivers. This definition of Flood Zone 2 applies only in England. Equivalent data is also provided for Wales, although in Wales the data on this layer of the Flood Map does not have the same relationship to Planning Guidance and is not referred to as Flood Zones.	Environment Agency	Polygon& Text	From 2005	Quarterly	Flooding
Flood Defences	This is the Environment Agency's holding of Linear Flood Defences. This dataset contains all flood defences constructed during the last five years with a standard of protection equal to or better than 1% for rivers and 0.5% from the sea. Some additional defences, which may be older or may have been designed to provide a lower standard of protection, are also shown where the information is currently available. This layer comprises linear flood defences, for example flood embankments and walls.	Environment Agency	Polygon& Text	From 2005	Quarterly	Flooding

Flooding from Rivers or Sea without Defences (Zone 3)	Flood Zones are defined by the Government's Planning Policy Guidance 25 on 'Development and Flood Risk' for England (PPG25) dated July 2001. The Flood Zones illustrate the probability of flooding across England for planning consultation. The Flood Zones have been identified using the best available data held by the Environment Agency ignoring the presence of flood defences (as required by PPG25, reference table 1 note (a)). This dataset is Flood Zone 3, the Environment Agency's best estimate of the areas of land, ignoring the presence of defences with an annual probability of flooding of 1.0 % (1 in 100) or greater from rivers, and 0.5 % (1 in 200) or greater from the sea. This definition of Flood Zone 3 applies only in England. Equivalent data is also provided for Wales, although in Wales the data on this layer of the Flood Map does not have the same relationship to Planning Guidance and is not referred to as Flood Zones.	Environment Agency	Polygon & Text	From 2005	Quarterly	Flooding
Flood Water Storage Areas	The Environment Agency's holding of 'Flood Storage Areas'. A flood storage area may be referred to as a balancing reservoir, storage basin or balancing pond. Its purpose is to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel. It may also delay the timing of a flood peak so that its volume is discharged over a longer time interval.	Environment Agency	Polygon & Text	From 2005	Quarterly	Flooding
Land Use Policies	Land Use Policies are collected from Local Authorities throughout Great Britain. Local planning authorities are required to prepare planning strategies for their area in accordance with Sections 36 and 54 of the Town and Country Planning Act 1990 (as amended) in England and Wales, and Section 2 of the Town and Country Planning (Scotland) Act 1997. Plans are produced by district councils, unitary councils and National Park authorities in which detailed policies are set out to guide development in the Local Authority area. The plans may include detailed proposals for individual sites as well as identifying areas suitable for housing, industry, retail, conservation or other land uses. The plan forms the statutory basis for planning decisions and provides a means of public consultation and control over development. Depending upon the stage of consultation with the public, Plans are unadopted (eg, 'deposit' plans) or adopted.	Various	Point, Line, Area & Text	Variable	Variable	Land Use Policies
Planning Applications	Planning Applications are collected from planning registers throughout Great Britain. Planning permission is required, in most cases for the construction of new structures, or a fundamental change of use of premises. For England and Wales they are granted in accordance with the Town & Country Planning Act 1990 as amended by the Planning And Compensation Act 1991, The Planning Acts. For Scotland planning applications are granted under The Town and Country Planning Act 1997.	ABI	Point & Text	Since 1997	Weekly	'Large' Planning Applications. 'Small' Planning Applications

Appendix 4 - The National Grid

All map references provided in the Sitecheck Review report are National Grid References, even where they refer to data taken from an historical map that predates the establishment of the National Grid referencing system in 1938. Landmark has a unique capability to transpose data between the earlier County Series maps and the modern National Grid based mapping.

The National Grid provides a unique reference system to locate any point in Great Britain. Landmark, in all its reports, gives this grid reference (NGR) as a six figure numeric reference e.g. 393200,224400.

However, many people feel more comfortable with an alphanumeric grid reference, in which each NGR has a two-letter prefix locating it within one of the 100 kilometre squares shown in the diagram opposite. This alphanumeric form is interchangeable with the purely numeric reference used by Landmark.

In order to convert the purely numeric grid references to an alphanumeric reference the following procedure should be used: in general, the last 3 figures of the 6-figure grid reference should be removed (in the case of The North of Scotland 7-figure Northings may occur). The resulting grid reference represents a 100-kilometre reference and thus can be plotted against the adjacent map to provide the correct letter code. This letter code will then replace the first figure of the Easting and Northing (first 2 figures in the case of the 7-figure Northing reference). The reference can then be re-assembled.

For example:

Numeric Reference	393200, 224400
Remove the last three digits	393200, 224400
100 km Reference	393,224
When placed within the grid	SO
Remove first digits from E & N	393200, 224400
Re-assembled reference	SO9320024400
